

Fork Positioner for Forklift

Fork Positioner for Forklifts - The fork positioner is actually a hydraulic apparatus which could allow the individual driving to control the lift truck without leaving the seat. They are constructed out of high quality materials and are intended to withstand the most demanding operations and work environments. Side shifting models have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more precise carrying and placement in a quicker and more effective method.

The unique blade pocket design enables the one operating it to securely sway the unit's forks without any worry of damaging the positioning cylinders. This can allow the worker the option to either execute independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on existing units.
