

Toyota Forklift Parts

Toyota Forklift Part - In the U.S., Toyota Materials Handling inc., or TMHU, has been the top selling lift truck dealer since 1992. Proudly celebrating more than 40 years of service, the Irvine, California based business provides a comprehensive line of quality lift vehicles. Resulting from their reputation of excellence, reliability, and sturdiness, Toyota remains popular in this aggressive market. Quality is the foundation of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are manufactured here.

All Toyota's manufacturing plants within Canada and the United States comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its devotion to continuous improvement and its environmentally friendly systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. To illustrate, the Toyota 8-Series IC lift vehicles emit 70% less smog forming emissions than the existing federal EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, links Toyota's achievement to its robust commitment to constructing the best quality lift trucks while delivering the utmost customer service and assistance. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's biggest lift truck dealer and is among the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota's parent company, Toyota Industries Corporation, has imparted an outstanding corporate principles towards environmental conservancy within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability can not be matched by other corporations and unquestionably no other resource handling maker can thus far rival Toyota. Environmental responsibility is a fundamental characteristic of corporate decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets California's more elaborate 2010 emission standards. The end product is a lift vehicle that produces 70 percent less smog forming emissions than the present Federal standards allow.

Moreover in 2006, Toyota developed a partnership with the Arbor Day Foundation, furthering their responsibility to the environment. Greater than 57,000 trees have been planted in regional parks and national forests damaged by ecological reasons such as fires, as a product of this relationship. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's system of sellers to non-profit organizations and local consumers to help sustain communities all over the U.S.

Toyota's lift trucks offer better output, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also known as "SAS", helps limit the risk of incidents and accidental injuries, and increasing productivity levels while minimizing the likelihood of merchandise and equipment breakage.

System Active Stability can sense factors that might lead to lateral unsteadiness and potential lateral overturn. When one of these factors have been sensed, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This changes the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the probability of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding strength.

SAS was originally introduced to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS have been integrated into nearly all of Toyota's internal combustion machines. It is standard gear on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory operator instruction, overturn fatalities across all designs have decreased by 13.6% since 1999. Additionally, there has been an overall 35.5% reduction in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's measure of excellence reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training course to help purchasers meet OSHA standard 1910.178. Training services, video lessons and a variety of materials, covering a broad scope of matters-from personal safety, to OSHA regulations, to surface and cargo situations, are available through the supplier network.

Toyota has maintained a continuous existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift truck. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America at the moment are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land.

Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service parts, with the entire investment exceeding \$113 million dollars.

The contemporary NCC was built to serve TMHU customers and sellers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its founder, Sakichi Toyoda, in 1867, and finally a education center.

TMHU has 68 authorized industrial equipment dealers, along with 189 dealership locations all through the United States, offering the most complete and inclusive consumer support and customer service in the industry. The company's new and Certified Used lift trucks, service, components, and financing features make Toyota dealerships a one-stop shop to ensure total client satisfaction.
